

Topics in the Theory of Lifting

Filesize: 5.62 MB

Reviews

The publication is fantastic and great. It can be rally exciting throgh reading period of time. I am just very happy to inform you that this is the greatest publication i actually have read in my very own daily life and could be he very best ebook for at any time.
(Prof. Alvis Wuckert)

Springer Okt 2013, 2013. Taschenbuch. Book Condition: Neu. 229x152x11 mm. This item is printed on demand - Print on Demand Neuware - The problem as to whether or not there exists a lifting of the $M^t/. 1$ space) corresponding to the real line and Lebesgue measure on it was first raised by A. Haar. It was solved in a paper published in 1931 [102] by 1. von Neumann, who established the existence of a lifting in this case. In subsequent papers J. von Neumann and M. H. Stone [105], and later on 1. Dieudonne [22], discussed various algebraic aspects and generalizations of the problem. Attempts to solve the problem as to whether or not there exists a lifting for an arbitrary $M^t/. space$ were unsuccessful for a long time, although the problem had significant connections with other branches of mathematics. Finally, in a paper published in 1958 [88], D. Maharam established, by a delicate argument, that a lifting of $M^t/. always exists (for an arbitrary space of a-finite mass). D. Maharam proved first the existence of a lifting of the $M^t/. space corresponding to a product $X = \prod_{i \in I} X_i$ and a product measure $\mu = \prod_{i \in I} \mu_i$ with $\mu_i = \mu_i'$ for all $i \in I$. Then, she reduced the general case to this one, via an isomorphism theorem concerning homogeneous measure algebras [87], [88]. A different and more direct proof of the existence of a lifting was subsequently given by the authors in [65]' A variant of this proof is presented in chapter 4. 192 pp. Englisch.$$
