ESSAI SUR LA CONSTRUCTION DES ROUTES ET DES VOITURES

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 102 pages. Original publisher: Reston, Va. : U. S. Geological Survey, 2007. OCLC Number: (OCoLC)122333053 Subject: Earthquakes -- Hawaii. Excerpt: . . . SEISMIC DATA PROCESSING Due to age and high cost of maintenance, Develocorder A was discontinued on August 1, 1997. Daily count of classified micreearthquakes from source regions around K lauea and Mauna Loa, and duration of tremor, were also discontinued. Coda duration, however, is measured in seconds from drum (ink or helicorder) records to determine a coda magnitude that is entered as an external magnitude in the final solution. In 1986, HVO acquired a VAX 11-750 computer and adopted the CUSP (California Institute of Technology USGS Seismic Processing) routine. Discriminated analog signals are converted to digital form, and detected events are saved in real time. Detected events are demultiplexed, and P-picks are made by the computer, producing a rough location. Events are examined by an analyst, on a graphics terminal, to refine computer P-picks and to time additional P-and S-phases for a preliminary location. Binary CUSP files are archived on magneto-optical media and translated into ASCII phase files. Locations and amplitude magnitudes are then determined, using the program HYPOINVERSE-000 (Klein, 00). Events are reworked and rerun, as needed, to produce a final solution. Magneto-optical copies of arrival times and output summary data are kept at HVO. In July 1992, HVO acquired VAX workstations for timing earthquakes using a generic version of CUSP. In addition to timing P and S arrival signals, the VAX workstations are capable of measuring peak-to-peak amplitudes along with the associated period. This capability allowed the renewal of amplitude magnitude determinations from the network seismic sta-tions. Amplitude data gathered from July 1992 to July 1997 became...
