AIRCRAFT RADIO SYSTEMS (EA-356)

Sterling Book House/Shroff Publishers & Distributors Pvt. Ltd., 2006. Softcover. Book Condition: New. The cockpit and equipment racks of modern aircraft, large and small, are becoming filled with ever more sophisticated systems. This book attempts to describe a certain class of such systems, namely those which rely for their operation on electromagnetic radiation. The subject matter is complex and wide-ranging, hence not all aspects can be covered in one volume. In deciding where the treatment should be light or perhaps non-existent, I have asked myself two questions: (1) which aspects can most usefully be covered in a book; and (2) at which group of people involved in aviation should a book covering such aspects be aimed? The answer to (1) must be `describe the theory`. One can, and indeed must, read or be told about how to operate the system; how to navigate using the systems; how to solder, crimp and change items; how to use test equipment, etc. but proficiency is impossible without practice. On the other hand gaining an understanding of how a particular system works is more of a mental exercise which can be guided in a book such as this. This is not to say that more practical matters are neglected, since it would not help one`s understanding of the theory of operation not to see, at least in words and pictures, how a particular system is controlled, presents its information, reacts to the environment, etc. Having decided the main line of attack the more difficult question of depth of treatment must be answered; in other words which group should be satisfied? Pilots need a superficial knowledge of how all the systems work; maintenance engineers on the ramp and in the hangar a more detailed knowledge; workshop engineers must have an understanding of the circuitry for...
